

# UK HealthCare Survey Results

## Secondhand Smoke Exposure in the Home, Kentucky 2009

---

- 51% of adult smokers who have children in the home tried to quit smoking in the past year.
- 45% of homes with children had at least one adult who did not believe secondhand smoke was a serious health hazard.
- 20% of homes with children have had someone smoke inside the home in the past 30 days.
- 18% of homes with children have at least one adult who is a current smoker.

*Note.* Respondents had children under 18 years of age living in the household

### About the Survey

The sample was drawn from the e-Rewards Consumer™ Panel, which consists of over 14,000 members in the state of Kentucky. The internet survey was conducted with individuals who were screened to meet the following criteria: 25-75 years of age; primary or joint decision maker regarding health care decisions for their family; Kentucky resident. A total of 477 adults participated in early 2009. The results reported here are for participants who reported having children under 18 years living in the household ( $n = 213$ ). Of those with children, the majority were female (74%), between 35 and 54 years old (73%), married (80%), earned \$35,000 or more per year (81%), had at least some postsecondary education (81%), and had health insurance (95%).
